We deliver your power generation to your customers – securely and effectively.

By choosing ka-tek GmbH you choose a partner who specializes in the planning and commissioning of power generation plants and industrial facilities. The grid connection of your plant, its electric protection equipment, as well as its uninterrupted construction and failure free operation, will be 100% handled and ensured by us. We design your electric network routing considering the specific features of your project while making the most of the available infrastructure. Since we supply both systems and services, ka-tek is able to provide you with the most economical and technical solutions tailored to your specific needs.

Our range of expertise within the Building and Civil Engineering field comprises the following services:

- Route planning including surveying
- Route securing
- Planning and coordination of railway, motorway, and waterway crossings
- Compiling ground expert opinions
- Construction management during construction up to commissioning
- Implementing requirements regarding archeology, nature conservation, and ordnance disposal according to official requirements
- Project documentation

Your benefits from cooperating with ka-tek GmbH:

- ✓ Turn-key competency
- ✓ Highly-qualified mechanical and electrical engineers
- ✓ Professional interface management between our customer and project partners
- ✓ Product know-how independent to manufacturers
- ✓ Economically- and technically-tailored solutions
- ✓ Short reaction times in case of malfunctions
- ✓ Experience in national and international projects
